AI Assignment #2

CISC3024 Pattern Recognition

October, 2026

AI Assignment # 2 aims to find a recent classification/recognition algorithm based on probability or Bayes theory for computer vision and pattern recognition. You are expected to use an AI tool or agent to do everything for you, including, but not limited to, algorithm searching, programming, and even report writing.

A report in Word or PDF format should be submitted online via UMMoodle next week and will go through a Turnitin similarity check.

Your report should contain detailed steps on how you did this assignment, including (1) how AI finds the algorithm, (2) algorithm description, (3) how AI implements the algorithm, (4) experiment settings and results, (5) what you have learnt from this AI assignment, and (6) a webpage link of your source codes.

Note: You are NOT allowed to write any code by yourself!
